First Lesson Walkthrough

Goal

By the end of this session, learners should understand:

- language models predict tokens
- training data changes behaviour
- low loss is not intelligence
- attention is not human reasoning

Suggested lesson length

45?60 minutes.

Lesson flow

Time	Activity
---	---
0?5 mins	Introduce AI prediction
5?15 mins	Tokenisation + Build it
15?30 mins	Train a tiny model
30?40 mins	Generate outputs
40?50 mins	Inspect attention + probabilities
50?60 mins	Reflection and discussion

Step 1 ? Introduce the idea

Explain:

> Kairo is not trying to be a smart chatbot.

It is trying to make AI mechanics visible.

Useful explanation:

> ?Language models predict what token comes next.?
